

Quantitative Methods of Analysis in Transportation

Using R and GIS

Rosa Félix
Gabriel Valença
Filipe Moura

An abstract network diagram with nodes and lines, rendered in a low-poly, geometric style. The nodes are represented by small, glowing orange and yellow spheres, while the lines connecting them are thin, translucent blue and green. The overall structure is complex and interconnected, resembling a transportation network or a data graph. The background is a gradient of warm yellow and orange tones, with some darker, geometric shapes in the lower right corner.
